CVA	12
PCS	7
anoxia, hypoxia	2
tumor	3
Other	6

Follow Up Measures	6 Months	12 Months
Independent w/Transportation	90%	83%
Return to life role	45%	83%
Improved Quality of Life	44%	80%
Living w/o Supervision	73%	100%

TBI Cause	#
mva	35
bike	2
fall	27
blow	11
other	5

Clients participating in the Brain Injury Rehabilitation Center (BIRC) in 2015 were seen in either the Day Treatment program or for Outpatient Services. Day Treatment is available to those clients who need a more intensive, transdisciplinary program and are funded to participate either by their insurer or privately. Participants in Outpatient Services often present with less need for the full scope of services and/or their insurer rehabilitation benefit limits prevent participation in the Day Treatment program. Graphed outcomes above represent only Day Treatment program participants, while Goal Attainment, below, represents both groups, collectively and separately.

All participants are included in the Demographic information for clients seen in 2015. The typical client is between the ages of 35 to 60, with an average age of 45. Most clients were referred after sustaining a Traumatic Brain Injury, resulting from either a Motor Vehicle Accident (MVA) or a fall. Gender is fairly evenly split between male and female, and most participants are Caucasian. Clients participating in the Day Treatment program were seen for an average of 174 treatment hours, or the equivalent of 29 full days of service (6 hours of treatment per day), although the days of service are often spread out over the course of 1 to 6 months, including day treatment and transition phases of therapy. Clients in Outpatient Services can expect to be seen for an average of 42 treatment hours if they are being followed by more than 1 therapy discipline (Physical, Occupational, Speech Therapy, and/or Psychology).

Goal Attainment	Expected	2013	2014	2015
Long Term Goals	75%	78%	80%	79%
Short Term Goals	75%	63%	72%	71%
2015 Goal Attainment				
Long Term Goals	84%	72%		
Short Term Goals	72%	68%		

As expected, clients participating in outpatient services were able to fully meet the agreed upon treatment goals than those in the more intensive Day Treatment program. Goals related to cognitive skills and psychosocial needs are most often lower in achievement due to less time and opportunity to gain and make habit of strategies to manage these on-going problem areas after the ABI.

Overall Program Satisfaction	2013	2014	2015
Definitely Satisfied	88%	83%	85%
Satisfied	13%	17%	15%

"The staff at BIRC are not only well educated, but show outwardly of their care and compassion to the clients and the treatment that we received. Dedication to their occupation greatly appreciated."
 "Absolutely fabulous! So cohesive, it felt everyone was up to date and on the same page. It was extremely impressive pt care!!"
 "I believe PRA does the best that they can. There are so many variables to each patient and your staff have done things very professionally and helpful."

"I felt included in my treatment plan"	2013	2014	2015
Strongly Agree	63%	50%	65%
Agree	38%	33%	35%

In all years shown, no client has chosen less than "Satisfied" or "Definitely Satisfied."
